

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	28 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Service Request	Submit a request for VPN Access
		Submit a request for Wi-Fi Access
		Submit a request for IP Whitelisting
		Submit a request for Firewall Access
FR-2	Dynamic Request Form	Show common request fields
		Show VPN-specific fields when VPN Access is selected
		Show Wi-Fi-specific fields when Wi-Fi Access is selected
		Show IP Whitelisting fields when IP Whitelisting is selected
		Show Firewall-specific fields when Firewall Access is selected
FR-3	Manager Approval	Automatically send the requested item to the requester's manager for approval
		Record manager approval or rejection in the request history
FR-4	Security Approval	Route IP Whitelisting and Firewall Access requests for Network Security approval
		Record security approval or rejection
FR-5	Network Fulfillment	Route approved requests to the Network Support team
		Allow Network Support to update fulfillment status and work notes
FR-6	Notifications	Notify the requester when the request is submitted
		Notify relevant users when approval or rejection occurs
		Notify the requester when fulfillment is completed
FR-7	Tracking & Audit	Provide request status visibility
		Maintain approval and request history for audit purposes

Non-functional Requirements:

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The request form should be simple to understand, show only relevant fields, and guide users through submission.
NFR-2	Security	Network requests should use controlled access, role-based permissions, approval controls, and auditable approval history.
NFR-3	Reliability	Requests and approval decisions should be recorded consistently, with workflow processing that minimizes manual errors.
NFR-4	Performance	Catalog forms and workflow actions should respond efficiently and avoid unnecessary manual processing steps.
NFR-5	Availability	The application should be accessible through the ServiceNow cloud instance for authorized users.
NFR-6	Scalability	The design should allow additional network request types, approval rules, teams, and notifications to be added without redesigning the entire solution.
