Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an employee who needs network access to complete my work	quickly request VPN, Wi-Fi, IP whitelisting, or firewall access through ServiceNow	the request process can be confusing and I may not know what information or approvals are required	different network services require different details and approval steps	confused and worried that my request may be delayed or rejected
PS-2	an employee waiting for a network service request to be completed	track my request and know when my access will be available	I may not have clear visibility into approvals and fulfillment and may need to follow up with IT	manual coordination between the requester, manager, security team, and network team can slow communication	frustrated when I do not receive timely updates or clear status information

Consolidated Problem Statement

Employees need a simple and transparent way to request network services through ServiceNow, but varying information requirements, multiple approval steps, and limited status visibility can make the process confusing and time-consuming. This can create frustration for employees and increase manual effort for IT and network teams.
